VETERINARY EXAMINATION FOR DYNAMIC SYNDICATIONS

At the request of Dynamic Syndications, a pre-sale veterinary examination of **Lot 111, ENCOSTA DE LAGO ex FUSAICHI ROSE Brown Yearling Filly**, brands as described in the 2013 William Inglis Australian Easter Yearling Sale Catalogue, was carried out at the Newmarket Sales Complex Randwick, NSW, on the 8th April 2013, prior to the commencement of the Inglis Australian Easter Yearling Sale.

Clinical Examination:

A well presented individual with good conformation. She was athletic, well balanced with good length of rein and a good flowing action at the walk. She had an excellent length of stride stretching out over ground. The angulations to shoulder and pastern were correct. She has a strong hindquarter. She was a free moving individual who was presented in excellent condition for inspection. The filly is bred to be a middle distance athlete as a 3yo and older horse. She is therefore still immature and will develop further. When fully mature, she is expected to reach an above average height of approximately 15.3 hh. Stethoscope examination of heartbeat was normal. She was examined in hand, and was found to be free moving. There was no clinical evidence of wear or injury to its extremities. There was no response to flexion tests. All clinical parameters were found to be within normal limits.

Radiographic Examination:

Pre-sale there was a full set of radiographs available for inspection in the repository at the Inglis Sales Complex. Upon examination, in my opinion there were within normal limits and no radiographic findings of any significance were noted.

Endoscopic Examination:

Post sale the upper respiratory tract was examined endoscopically by Randwick Equine Centre and they found the larynx and pharynx to be normal in appearance and function.

Conclusion:

In my opinion, at the time of this examination, **Lot 111, ENCOSTA DE LAGO ex FUSAICHI ROSE Brown Yearling Filly** is in so far as can be determined from the extensive examination conducted; suitable for racing and public syndication and as such, is therefore suitable for all risk mortality insurance cover. I confirm that I advised Dynamic Syndications that in my opinion this lot was suitable for their purchase.

Yours faithfully,

Dr. T.M.B. Roberts BVSc. MRCVS
12 April 2013

NB: This examination is valid for seven (7) days and is only for the use of the person requesting the examination. The issuer of this certificate has no financial interest in the above horse and no contract with any other third party. The issuer has a long standing relationship with Dynamic Syndications to provide a detailed veterinary assessment and specific advice on suitability of prospective yearling purchases at all yearling sales within Australasia.

VETERINARY EXAMINATION FOR DYNAMIC SYNDICATIONS

At the request of Dynamic Syndications our practices attending veterinarian Dr. Ramiro Pellegrini MV re-examined the **ENCOSTA DE LAGO ex FUSAICHI ROSE brown 2yo filly**, brands C nr sh. 90 over 1 off sh., (Microchip: 985100010980173), to assess its continued suitability for public syndication. The purpose of the re-examination request was for the promoter to comply with regulatory requirements and supply a current veterinary certificate for inclusion with their PDS to Racing NSW.

I had previously inspected this horse on behalf of Dynamic Syndications at the William Inglis Australian Easter Yearling Sales on the 8th April 2013 where a detailed inspection including a full set of x-rays were read and post sale endoscopic evaluation was performed and I advised my client the horse was in my opinion suitable for purchase.

Clinical Examination:

The re-examination performed by Dr. Pellegrini was a general health check which included temperature, pulse, respiration, thoracic auscultation as well as an ophthalmological examination for eye sight, mucous membrane, colour and musculature symmetry and basic conformation, where no abnormalities were found.

There was no lameness at the walk and trot in hand. No response to hoof testers was found. On palpation and manipulation of the distal limbs including major joints, no abnormalities were found. The filly had a quiet temperament

Ophthalmologic Examination:

Ophthalmoscopic and clinical examination revealed no abnormalities.

Auscultation of Thorax:

The horse has a normal and regular heart rhythm at rest. The horse has normal lung sounds and normal respiratory rate at rest.

No radiographs, blood tests, drug sampling, ECG or upper respiratory endoscope were performed.

In our opinion the filly remains a quality individual, athletic and free moving. She is well conformed and well balanced. For her foal date of 4 November 2011, she is well grown and strong. The filly is still immature and will develop further. All clinical parameters were found to be within normal limits.

Conclusion:

In our opinion, on the **18th September 2013** at the time of this re-examination, the **ENCOSTA DE LAGO ex FUSAICHI ROSE brown 2yo filly** is in so far as can be determined from the examination conducted, presents in good health and has passed the clinical examination and therefore remains suitable for all risk mortality insurance cover and is suitable for racing and public syndication.

Yours faithfully,

Dr. T.M.B. Roberts BVSc. MRCVS
